

PROFESSIONAL SUMMARY

- Frontend engineer specialising in data visualisation — with hands-on production experience in Highcharts, Chart.js, D3.js, and SVG-based rendering engines, translating complex datasets into insightful, user-centred experiences in React and TypeScript.
- Built and shipped 25+ highly customised interactive charts for a production ML analytics platform, giving end users clear visibility into real-time model metrics — exactly the intersection of data, engineering, and design this role requires.
- Strong technical leadership record: led end-to-end feature delivery, drove architectural decisions, authored 50+ code reviews, and mentored engineers — with fluency in AI-assisted development tools (Claude Code, GitHub Copilot) that measurably improve team velocity.
- Deep commitment to accessible, polished user experiences: WCAG 2.1 compliance, responsive design, 90%+ test coverage, and close partnership with UX/UI designers across enterprise and startup environments.

TECHNICAL SKILLS

Data Visualisation: Highcharts.js, Chart.js, D3.js, SVG rendering, custom animation engines, Tableau embeddings

Frontend: TypeScript, JavaScript (ES6+), React, Redux, React Query, Angular, HTML5, CSS3, SCSS, Context API, Storybook.js

APIs & Architecture: REST APIs, GraphQL, SSR, responsive design, component library design, web performance optimisation

Accessibility & UX: WCAG 2.1, i18n / internationalisation, HCI research, user-centred design principles

Testing & Quality: Jest, unit testing, integration testing, debugging in dev and production environments

AI Tooling: Claude Code, GitHub Copilot — prompt-driven development, AI-assisted code generation and documentation

DevOps & Cloud: GitHub Actions, Docker, Azure (VM, Service Bus), AWS (EC2), CI/CD Pipelines, Linux

EXPERIENCE

HCI Researcher | Jan 2026 – Present | Arizona State University | Tempe, AZ

Researching the design of intuitive, trustable user interfaces for AI-integrated applications — with a focus on human-centred design, usability, and how users interpret and act on data-driven interfaces.

- Designing and evaluating UI experiences where clarity, trust, and interpretability are primary goals — directly applicable to building analytics dashboards that help users ask the right questions about their data.

Lead Developer | Aug 2025 – Dec 2025 | ABC Academy of Music | MS Industry Capstone | Phoenix, AZ

Led a team of 5 engineers delivering a production web platform end-to-end — from technical design through release and post-launch support.

- Owned the full feature lifecycle: architecture, implementation, CI/CD setup on AWS EC2, post-release monitoring, and team mentorship — delivering to a 99% availability target.
- Increased team delivery velocity by 75% by introducing AI-assisted development workflows with Claude Code and Copilot, using detailed JIRA stories as context to accelerate feature implementation.

Lead Developer | Apr 2023 – Dec 2023 | Tecnotree | Bengaluru, KA

Awarded "Spotlight Top Performer" for leading high-quality React and Node.js feature delivery with minimal post-release defects.

- Led front-end technical direction, code reviews, and delivery standards across the team — maintaining pride in code ownership and establishing shared conventions for quality and testability.

Senior Software Engineer | Jul 2022 – Mar 2023 | PangeaTech | Bengaluru, KA

Founding engineer on a production ML SaaS platform — owned the entire data visualisation layer, frontend architecture, and engineering standards from 0 to 1.

- **25+ production data visualisation components:** Built a library of highly customised interactive charts using Highcharts and Chart.js in React, surfacing real-time ML model metrics for data science and platform teams — giving users clear, actionable visibility into their data.
- Implemented D3.js-driven visualisations for exploratory analytics views, translating raw machine data into legible, insight-driven user experiences.
- **25% reduction in network calls** by architecting Redux and React-Query caching strategies — optimising dashboard performance and reducing perceived load times for data-heavy views.
- Designed and integrated REST API data contracts between the Node.js backend and React frontend — ensuring consistent data flow for real-time chart updates across the analytics platform.
- Authored 50+ code reviews and mentored junior frontend engineers on component architecture, visualisation best practices, and performance patterns.

Software Engineer | Nov 2021 – Jul 2022 | PangeaTech | Bengaluru, KA

- Built custom data visualisation dashboards with interactive graphs and Tableau embeddings — developing reusable, well-documented chart components consumed across multiple product views.

- Managed complex client-side state for data-heavy dashboards using Context API and Redux — ensuring consistent, performant rendering under high-frequency data updates.
- **85% faster deployments:** Containerised the application with Docker and automated CI/CD via GitHub Actions — eliminating deployment failures and enabling rapid, confident iteration.

Software Engineer | Jul 2019 – Apr 2021 | Tenable (a JPMorgan Chase company) | Pune, MH

Built and maintained front-end features for a high-traffic enterprise platform serving millions of users — with a strong emphasis on accessibility, code quality, and long-term maintainability.

- **WCAG 2.1 accessibility:** Achieved 90% unit test coverage and ensured full compliance with web accessibility standards and i18n internationalisation across all UI components.
- Built a reusable component library using Storybook.js — documenting components for consistent use across teams and promoting design system adoption at enterprise scale.
- **35% reduction in network requests** by migrating a microservice from REST to GraphQL, eliminating over-fetching and improving dashboard rendering performance.

PROJECTS & ADDITIONAL EXPERIENCE

Compulator | compulator.app | React-based simulation and visualisation platform

- Architected a custom SVG-based rendering and animation engine in React using Hooks, Context API, and CSS — demonstrating hands-on production experience with SVG as a primary rendering target, directly relevant to data visualisation component development.
- Built with TypeScript using prompt-driven development with Claude Code and Copilot — showcasing how AI-assisted tooling integrates into a real engineering workflow to improve productivity and code quality.

Full-stack Engineer Intern | Friendly Brands | Sep – Oct 2021

- Improved click-through rate 30% through data-driven A/B testing of UI variants — applying UX and design intuition to measure and improve user experience outcomes.

Engineering Tutor | ASU: Delivered 100+ tutoring sessions on Data Structures and Algorithms, Operating Systems, and Databases — reinforcing mentorship as a core engineering habit.

CERTIFICATIONS

Foundations of AI Engineering | CodePath | Spring '26 • Applications of AI Engineering | CodePath | Summer '26

EDUCATION

Master of Science in Software Engineering, GPA: 3.87 / 4.0 | Dec 2025 | Arizona State University | Mesa, AZ

HCI research: intuitive and trustable UI/UX design for AI-integrated applications. Coursework: System Design, Data Structures and Algorithms, Agile.

Bachelor of Science in Computer Science | Aug 2019 | REVA University | Bengaluru, KA
