

Summary

As an engineer with 4+ years of experience I bring the following to this role:

- AI-native and [AI fluency](#) in [Claude](#) and Copilot
- Ownership, startup experience and ability to [move projects from 0 to 1](#)
- [Object oriented design](#), enterprise experience and code quality
- [Customer empathy](#) and UI/UX experience
- Agile methodology experience
- [Communication skill](#) and [technical mentorship](#)
- [Relational](#) database expertise, frontend and REST API development experience
- Cloud computing and DevOps experience

Technical Skills

Full-stack Technologies: [Node.js](#), Express.js, TypeScript, [Python](#), [Java](#) (Spring), [React](#), Redux, JavaScript, CSS, HTML

Database Technologies: MySQL, [PostgreSQL](#), MongoDB, SQL, Elasticsearch

DevOps, Infra & Cloud: [Docker](#), GitHub Actions, Git, Linux, [Azure](#) (VM, Service Bus, Blob Storage), [AWS](#) (EC2)

Education

Master of Science in Software Engineering, 3.87 / 4.0 GPA | 12/2025 | **Arizona State University** | Mesa, AZ

Bachelor of Science in Computer Science | **REVA University** | Bengaluru, KA

Experience

Lead Developer | 08/2025 - 12/2025 | **ABC Academy of Music** | MS Capstone Project | Remote (Phoenix, AZ)

Led a team of 5 developers driving agile practices, technical direction, and requirement gathering with the PM.

- Built Java Spring Boot REST APIs backed by PostgreSQL; automated CI/CD pipeline on AWS EC2.
- Increased the team's feature delivery velocity by 75% by introducing the team to an agentic workflow that uses detailed JIRA stories as context for Copilot while leading agile practices.

Lead Developer | 04/2023 - 12/2023 | **Tecnotree** | Bengaluru, KA

- **Awarded the "Spotlight Top Performer"** cash award for leading high-quality feature delivery in React and Node.js.
- Led development of React UI stepper form with minimal bugs within schedule earning client accolades.

Senior Software Engineer | 07/2022 - 03/2023 | **PangeaTech** | Bengaluru, KA

Founding engineer who built a greenfield ML product from 0 to 1, owning performance, infrastructure, and deployment.

- Reduced data processing time by 80% (4 hours to 45 minutes) by redesigning the Python ML backend to distribute workloads across Kubernetes-orchestrated containers (event driven architecture) saving customer time.
- Used Highcharts and Chart.js in the React frontend app to create 25+ highly customized charts to enhance data visualization powered by data from MongoDB, served by an Express.js API service (Node.js).
- Reduced Azure cloud costs by 30% with better VM utilization. Scaled Node.js (Express.js app) across CPU cores using PM2 cluster mode, running one process per core.
- Decreased debugging time from 4 hours to near real time by implementing centralized logging for a distributed system using the ELK stack to address the observability gap enabling faster iterative improvements.
- Introduced MLflow for ML model version management, logging, testing, and experimentation across 5 algorithms and 100+ experiment runs, enabling reproducible model comparison and faster iteration.
- Enhanced code quality and standards by writing 50+ code reviews and mentoring junior developers.

Software Engineer | 11/2021 - 07/2022 | **PangeaTech** | Bengaluru, KA

- **Engineered a 97% reduction in MySQL database refresh duration** (from 8 hours to 15 minutes) by converting synchronous Python to asynchronous Python, saving significant client time. Data collection using async API calls and batching up write requests using SQL bulk insert.

- Reduced network calls by using caching via Redux and React-Query and managed state using Context API and Redux.
- Improved the availability and reliability of MySQL database servers ensuring 99% availability via server replicas.
- Reduced deployment time by 85% (from 27 to 4 minutes) and deployment failures by containerizing the application with Docker and automating the pipeline via GitHub Actions saving dev time.

Software Engineer | 07/2019 - 04/2021 | **Tenerity (a JPMorgan Chase company)** | Pune, MH

- Delivered C# REST APIs and Angular frontend components for a high-traffic flight booking platform serving millions of customers keeping security and maintainability in mind (SonarQube, Jenkins).
- Increased test coverage to 90% and ensured compliance with accessibility standards (WCAG) and internationalization.
- Applied test-driven development, OOP and SOLID principles to deliver maintainable, production-grade code.

Additional Experience

HCI Researcher | 01/2026 - Present | **Arizona State University** | Tempe, AZ

- Developing an Android app that generates context-aware replies using LLMs.
- Formulating research questions and developing a study plan for data collection for the research paper.

Engineering Tutor | 08/2024 - 12/2025 | **Arizona State University** | Tempe, AZ

- Delivered 100+ tutoring sessions on Agile & Lean, Data Structures and Algorithms, Operating Systems, and Databases.
- Guided students using a hands-off mentoring approach enabling students to become independent learners.

Full-stack Engineer Intern | 09/2021 - 10/2021 | **Friendly Brands** | Remote

- Improved click-through rate of an SSR rendered upsell UI widget by 30% for an e-commerce live site through data-driven A/B testing of alternative UI features using Python (FastAPI).

Freelance Full stack Engineer | 05/2021 - 9/2021 | **Upwork** | Bengaluru, KA

- Delivered client projects with high satisfaction, including repeat contracts and positive client reviews.
- Used JavaScript (Node.js) to parse CSV excel files and calculate customer's Covid-19 business losses and assess their loss category and compensation owed using test-driven development to accurately map the business logic.
- Developed React UI components, Golang APIs, resolved legacy issues, and deployed the application on AWS EC2.

Certification

Foundations of AI Engineering | CodePath | In Progress, Spring 2026

PostgreSQL Proficiency | Cursa | April 2026

Project

Web Simulator, a system design simulation platform to model and test distributed architectures.

- Built a frontend with React and Vitest, the backend with Express Node.js APIs with PostgreSQL as the database.
- Built a custom renderer engine for animation using custom React Hooks, Context API, SVG and CSS.
- Built simulation engine with TypeScript using test-driven development and Claude to model and test distributed system architectures.
- Deployed to Azure VM using docker containers for reproducible builds, using GitHub Actions for CI/CD deployments.
