

Frontend Developer Summary

As an experienced engineer with 4+ years I bring the following to this role:

- Frontend experience in React (Typescript / JavaScript)
- A/B testing, UI/UX principles
- [AI fluency](#) in [Claude](#) and Copilot
- Founder engineer startup experience, ownership, and ability to [move projects from 0 to 1](#)
- Agile methodology experience
- [Technical mentorship](#), leadership and [communication skills](#)
- AI and ML development (LLM integration, HCI research in LLM integration work)
- Enterprise experience, code quality and testing

Education

- **Master of Science in Software Engineering**, 3.87 / 4.0 GPA | 12/2025 | **Arizona State University** | Mesa, AZ
 - HCI research and data collection around building intuitive and trustable UI interfaces and applications.
 - Built automobile interfaces with a special focus on intuition, ease of use and trustability.
- **Bachelor of Science in Computer Science** | **REVA University** | Bengaluru, KA

Experience

Lead Developer | 08/2025 - 12/2025 | **ABC Academy of Music** | MS Industry Capstone Project | Remote (Phoenix, AZ)

Led a team of 5 developers driving agile practices, technical direction, and requirement gathering with the PM.

- Built a low latency frontend using server-side rendering (SSR) REST APIs using JavaScript, HTML and CSS.
- Increased the team's feature delivery velocity by 75% by introducing the team to an agentic workflow that uses detailed JIRA stories as context for Copilot while leading agile practices.

Lead Developer | 04/2023 - 12/2023 | **Tecnotree** | Fulltime | Bengaluru, KA

- **Awarded the "Spotlight Top Performer"** cash award for leading high-quality feature delivery in React and Node.js.
- Led development of React UI stepper form with minimal bugs within schedule earning accolades.

Senior Software Engineer | 07/2022 - 03/2023 | **PangeaTech** | Fulltime | Bengaluru, KA

Founding engineer who built a greenfield ML product from 0 to 1, owning data visualization, usability and performance.

- Used Highcharts and Chart.js in the React frontend app to create 25+ highly customized charts to enhance data visualization for clients powered by data from MongoDB, served by an Express.js API service (Node.js).
- Reduced network calls by 25% by using Redux and React-Query to cache results.
- Enhanced code quality and standards by writing 50+ code reviews and mentoring junior developers.

Software Engineer | 11/2021 - 07/2022 | **PangeaTech** | Fulltime | Bengaluru, KA

- Implemented custom data visualization dashboards with graphs and Tableau embeddings.
- Reduced network calls by using caching via Redux and React-Query and managed state using Context API and Redux.

Software Engineer | 07/2019 - 04/2021 | **Tenerity (a J.P. Morgan and Chase company)** | Fulltime | Pune, MH

Worked on a high-traffic travel loyalty platform serving millions of customers keeping security and maintainability in mind.

- Increased click through rate by 15% by switching to a new cross-sell itineraries modal developed with Angular.
- Used Storybook.js to develop multiple reusable UI components while maintaining modularity and code quality.
- **Reduced network requests by 35%** by migrating a microservice from REST to GraphQL, eliminating over-fetching.
- Increased test coverage to 90% and ensured compliance with accessibility standards (WCAG) and internationalization.

Additional Experience

Full-stack Engineer Intern | 09/2021 - 10/2021 | **Friendly Brands** | Internship | Remote

- Improved click-through rate of an SSR rendered upsell UI widget by 30% for an e-commerce live site through data-driven A/B testing of alternative UI features using Python (FastAPI).

Projects

Compulator, developing [compulator.app](#), a simulation-based system design learning platform (Leetcode for system design).

- Built a simulation engine with TypeScript using prompt-driven development with Claude Code and Copilot.
- Built a custom renderer engine in React for animation using custom React Hooks, Context API, SVG and CSS.
- Managed infrastructure and deployments on Azure VM, including CI/CD pipelines, secure hosting (TLS), SEO for visibility, and site reliability.

Python Board Game, a game written in Python with custom graphics and audio effects.

- Received the “Best Paper Award”, a university level award for my paper “Indian Sub-Continent Risk Game”.
- Intuitive drag and drop interface with snappy graphics and audio effects.

Travel Recommendations MCP, a Model Context Protocol server to help AI agents better tailor travel recommendations

- Provides JSON-RPC based MCP endpoints to help AI agents provide better travel recommendations across offers.
- Typescript written REST API service which serves tailored recommendations considering location, loyalty points, pagination, client offerings, previous bookings and previous offer clicks.
- Fault-tolerant service with fallbacks on service non-availability, rate limiting to handle excess requests and which points Agentic client to alternate resources on failure.

Music Recommendation and Classification, a RAG and LLM based music discovery system

- Built a GenAI-powered music recommender using PostgreSQL + pgvector for embedding-based semantic retrieval, with LLM-driven song summarization and recommendations.

Certifications

- **Foundations of AI Engineering** | CodePath | Spring '26 | Basics of prompt engineering training
- **Applications of AI Engineering** | CodePath | Summer '26 | Special focus on AI usage in large code basis

Technical Skills

- **Frontend:** JavaScript, TypeScript, HTML, CSS, SCSS, React, Angular, Redux, React Query
- **Data Visualization:** Highcharts.js, D3.js
- **Tests & Tooling:** Jest, Vite, Axios
- **Backend:** Node.js, Express.js, Java (Spring), Python
- **Miscellaneous:** MySQL, PostgreSQL, MongoDB, SQL, Elasticsearch DevOps, Infra & Cloud: Docker, GitHub Actions, Git, Linux, Azure (VM, Service Bus, Blob Storage), AWS (EC2)
